Anna Lieb
24201061
COMP10310 Web Design Project
Project Name: ExperieN(Y)Ce

Main Features
- **Six Pages**
  - Home (home.html)
  - What To Do (whattodo.html)
    - Attractions (attractions.html)
    - Special Events (specialEvents.html)
  - Where To Stay (wheretostay.html)
  - Sports Teams (sportsteams.html)
- **Logo**
  - The logo (an SVG file) appears on the left side of the screen when the navigation menu is across the top (when the window is wide enough).
  - When the window is not wide enough, the logo appears on the right side of the top of the page.
  - When a user changes the size of the screen, the logo moves from one side to the other, and it smoothly glides across the screen.
- **Dark Mode**
  - A dark mode button is present in the navigation bar (either on top or in the drop-down, depending on the window size).
  - When pressed, the background and text colours change.
  - When dark mode is changed, the logo bounces in.

Page-Specific Highlights
- **Home**
  - Photos on the left will hide content that takes up too much space in the y-direction. This is so it stays even with the main text and doesn't take up too much space. Additionally, if the window width is too small, the photos will not appear.
- **Attractions**
  - Some of the attractions have multiple photos. For these, the image changes by sliding to the left every four seconds. *Note: this feature always worked when using Google Chrome but did not always work as well when I used Safari.*
    - Javascript is used to update the text in the button and to start or stop the animation.
  - There is a button at the top that stops the animation, so everything has one image. The location of the button depends on the window width.
  - The number of attractions per row depends on the window width.
- **Where to Stay**
  - The layout of this page changes based on page width. The map is either to the left or below the table.

- ○ The map uses the Google Maps API.
  - ○ JavaScript is used to add the markers and listen to if the marker is clicked (if so, will display the name of the Hotel at that location).
- ○ The list of hotels can either be sorted by price or by stars. JavaScript is implemented to sort the list.
- **Sports Teams**
  - ○ When hovering over an image, it will display information about the team.
  - ○ The images bounce in to hint to the user that there is text below the images.
